

### Impulse Relays

The impulse relays are used to control, by means of pushbuttons, lighting circuits consisting of:

- Incandescent lamps, low-voltage halogen lamps, etc. (resistive loads)
- Fluorescent lamps, discharge lamps, etc. (inductive loads)

### Impulse Relays Are Used

- Closing of the impulse relay pole(s) is triggered by an impulse on the coil.
- Having two stable mechanical positions, the pole(s) will be opened by the next impulse. Each impulse received by the coil reverses the position of the pole(s).
- Can be controlled by an unlimited number of pushbuttons.
- Zero energy consumption.

### Yellow Clip

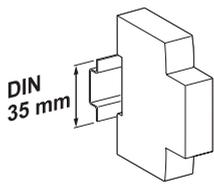

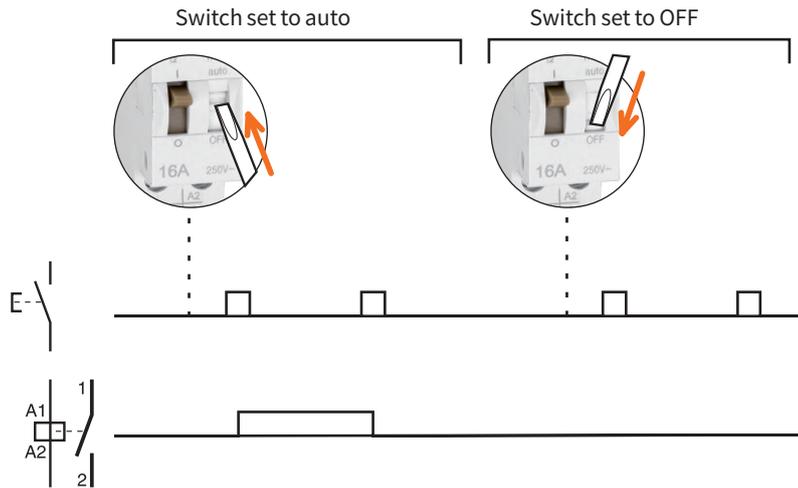

- A simple clip-on system for flexible auxiliaries combination and improved robustness
- For electrical and mechanical connections
- Insulated terminals IP20
- Built-in or optional auxiliary function: state indication, centralised control, latched control, control for illuminated pushbutton, step-by-step control, time delay
- Manual controls on front face: direct and priority manual control by O-I toggle
- Mechanical contact position indicator
- Disconnection of remote control by selector switch (except for 4P single-piece EKLR16) for maintenance operation
